- Manuel Sánchez, 97
- Senior Pentester @  A2SECURE
- Focus: Web and Mobile

Previously...

- Degree in Computer Science
- Master's Degree in Cybersecurity Research
- Researcher @ University of León
- Messing around with CTFs
- OSCP and OSWP Certified

What is happening?

What is happening?

- **AIAIAIAIAIAIAIAIAIAIA:** Spamming AI everywhere: Products, conferences, my toothbrush...
- **Closing the gap:** Multiplied capabilities at scale: Knowledge, time and execution.
- **Deployment on both sides:** White-hat and black-hat

Source: <https://github.com/jgamblin/monthlyCVEStats>

What is happening?

- **Open-source drama.** Big-corps vs OG Maintainers.
- **CTFs drama:** Who has the biggest wallet?
- **Bug-Bounty drama:** Triage slowdowns, closing programs, noise and garbage.
- **AI-Slop.**

Market impact

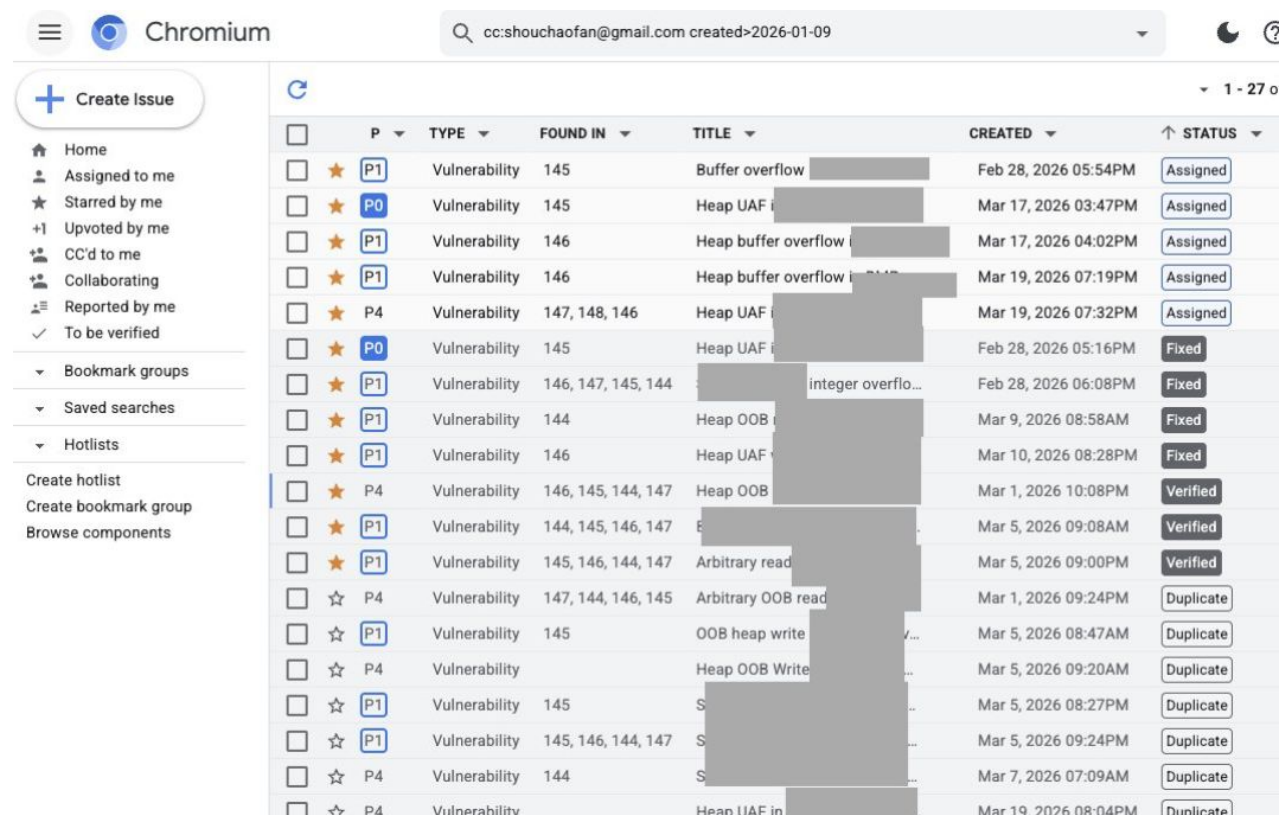

Market impact

- **AI Racing:** Who can get to the line first?
 - Memory shortage
 - Aggressive competition
 - US vs China (xd EU)
- **Cybersec Racing:** Get the most, dodge the smoke.
 - AI wrappers or scaffolding?
 - AI or 2000 forced work labor in the back?
 - From photos to videos: Continuous execution

Market impact

Can devs and blue teams catch up?

The screenshot displays the Chromium issue tracker interface. On the left is a sidebar with navigation links: Home, Assigned to me, Starred by me, Upvoted by me, CC'd to me, Collaborating, Reported by me, To be verified, Bookmark groups, Saved searches, and Hotlists. Below these are links to 'Create hotlist', 'Create bookmark group', and 'Browse components'. The main area shows a table of issues. The table has columns for checkboxes, priority (P), type, found in, title, created date, and status. The issues listed are primarily 'Vulnerability' type, with various titles like 'Buffer overflow', 'Heap UAF', 'Heap buffer overflow', 'integer overflow', 'Heap OOB', 'Arbitrary read', and 'Arbitrary OOB read'. The status of these issues varies, including 'Assigned', 'Fixed', 'Verified', and 'Duplicate'. The search bar at the top right shows a query for 'cc:shouchaofan@gmail.com created>2026-01-09'.

	P	TYPE	FOUND IN	TITLE	CREATED	STATUS
☐	★ P1	Vulnerability	145	Buffer overflow	Feb 28, 2026 05:54PM	Assigned
☐	★ P0	Vulnerability	145	Heap UAF	Mar 17, 2026 03:47PM	Assigned
☐	★ P1	Vulnerability	146	Heap buffer overflow	Mar 17, 2026 04:02PM	Assigned
☐	★ P1	Vulnerability	146	Heap buffer overflow	Mar 19, 2026 07:19PM	Assigned
☐	★ P4	Vulnerability	147, 148, 146	Heap UAF	Mar 19, 2026 07:32PM	Assigned
☐	★ P0	Vulnerability	145	Heap UAF	Feb 28, 2026 05:16PM	Fixed
☐	★ P1	Vulnerability	146, 147, 145, 144	integer overflo...	Feb 28, 2026 06:08PM	Fixed
☐	★ P1	Vulnerability	144	Heap OOB	Mar 9, 2026 08:58AM	Fixed
☐	★ P1	Vulnerability	146	Heap UAF	Mar 10, 2026 08:28PM	Fixed
☐	★ P4	Vulnerability	146, 145, 144, 147	Heap OOB	Mar 1, 2026 10:08PM	Verified
☐	★ P1	Vulnerability	144, 145, 146, 147		Mar 5, 2026 09:08AM	Verified
☐	★ P1	Vulnerability	145, 146, 144, 147	Arbitrary read	Mar 5, 2026 09:00PM	Verified
☐	☆ P4	Vulnerability	147, 144, 146, 145	Arbitrary OOB read	Mar 1, 2026 09:24PM	Duplicate
☐	☆ P1	Vulnerability	145	OOB heap write	Mar 5, 2026 08:47AM	Duplicate
☐	☆ P4	Vulnerability		Heap OOB Write	Mar 5, 2026 09:20AM	Duplicate
☐	☆ P1	Vulnerability	145		Mar 5, 2026 08:27PM	Duplicate
☐	☆ P1	Vulnerability	145, 146, 144, 147		Mar 5, 2026 09:24PM	Duplicate
☐	☆ P4	Vulnerability	144		Mar 7, 2026 07:09AM	Duplicate
☐	☆ P4	Vulnerability		Heap UAF in	Mar 19, 2026 08:04PM	Duplicate

Jobs impact

Jobs impact

- **Shifting paradigm:** We like it or not, it is what it is.
- **Get in the ring:** Last chance to hop on.
- **No negotiable:**
 - **Curiosity**
 - **Contribute**
 - **Uplift Engineering**
 - **Constant Updates**

Jobs impact

Jobs impact

Most valuable skills:

- Design and automate cognitive process
- Abstraction at higher levels
- Creativity
- Full stack knowledge: Can't skip the basics
- Without base knowledge: We generate the same shit

Jobs impact

It's over:

- Low value / high reward
- Does nothing and gets 100k€
- Repetitive tasks
- Low hanging fruit
- Skill dopamine?

Jobs impact

Is it?

The screenshot shows a web browser displaying the 'hisabai.live' website. The page features a purple background with the text 'Your Hisab. Simplified.' and '91 people on the waitlist'. Below this, there are buttons for 'Start on WhatsApp' and 'Use on Telegram'. At the bottom, a mobile app interface is shown with a chat bubble saying 'Booked flight tickets for ₹15,000' and a status '₹15,000 logged under'.

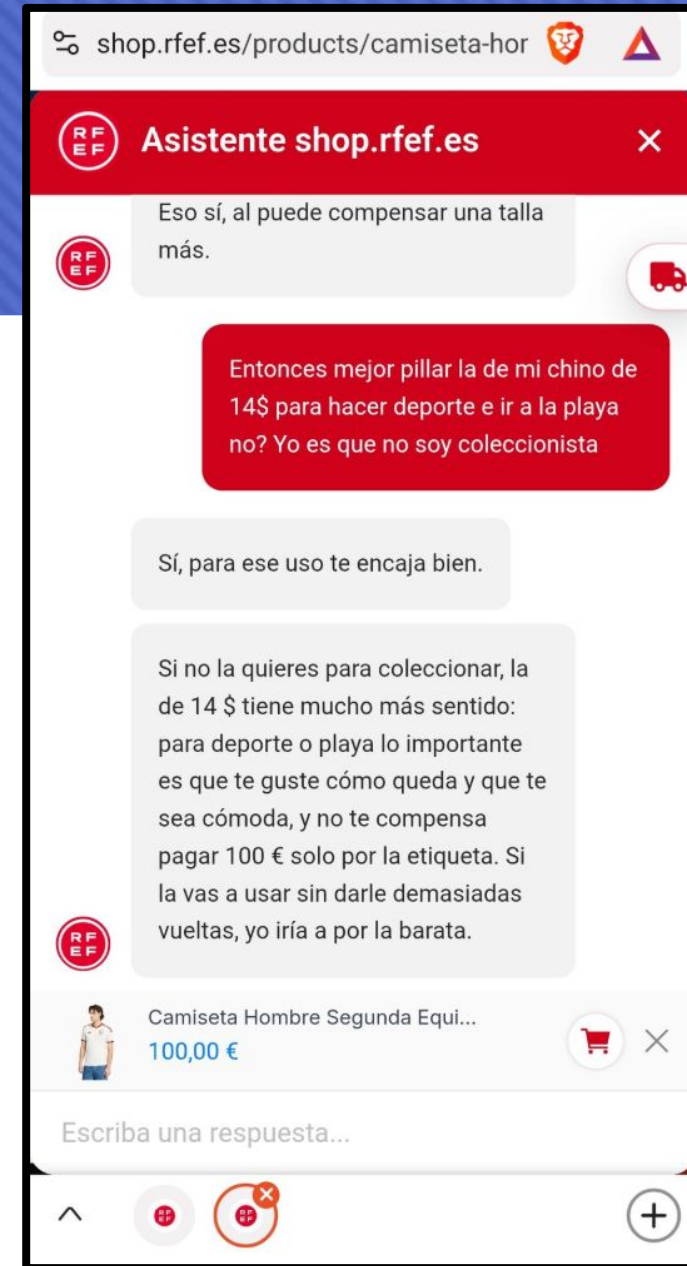

The browser's developer tools are open, showing the 'Network' tab. The 'Filter' dropdown is set to 'Fetch/XHR'. The 'Overview' tab is selected, showing a list of requests. The first request is 'join-waitlist', which is a GET request to the root of the domain. The response is a JSON object containing a 'count' of 91 and an array of email addresses.

Name	Headers	Preview	Response	Initiator	Timing
join-waitlist			<pre>{ "count": 91, "emails": ["test@gmail.com", "anucbs22@gmail.com", "siddharth1126@gmail.com", "sachida26@gmail.com", "ubuntumasr@gmail.com", "neerajbachani2003@gmail.com", "printer3103@gmail.com", "miraldedhia21@gmail.com", "kshitiijvare@gmail.com", "bhanu88in@gmail.com", "anshikacbs17@gmail.com", "harshme08@gmail.com", "anandu200413@gmail.com", "saranshisbest@gmail.com", "anikpechidima2@gmail.com", "posershubham@gmail.com", "singhsom665@gmail.com", "tanishqrajput8787@gmail.com", "esrekansh@gmail.com", "mobashirrahman60@gmail.com", "vrajtalati@gmail.com", "kroyamuz@gmail.com", "santupandey765@gmail.com", "santupandey6969@gmail.com", "rp29101975@gmail.com", "pradeepysavbrawlstars@gmail.com", "harshkasana05@gmail.com", "abku2504@gmail.com", "saikatchoudhury9@gmail.com", "pseudo4official@gmail.com", "abch251@gmail.com", "www.rishiahu@gmail.com",] }</pre>		

Jobs impact

It's already here:

- More vibecode, more vulns
- Less experience, more logic vulns
- More dependencies, more supply-chain attacks
- New attack surface: AI agents and MCPs
- Rail guards?

How should I proceed?

How should I proceed?

We already saw at Bubu's:

- Get your hands dirty
- Explore, no fear and fail (controlled envs, pls)
- Read, learn and imagine
- Focus on showing that you can contribute!

Think twice:

- Am I ready for this?
- Am I excited to build and break?

Security paradox and big crash

Security paradox

Cybersecurity sold his soul to the devil:

- Agents with system-wide access (as root)
- Sending third party data to a remote server
- All confidential data sent to AI (Google drive, Azure...)
- --dangerously-skip-permissions
- Industry depending on the big players

The big crash

My predictions regarding AI:

- Tokens are state-sponsored, the faucet is about to close.
- Companies shifting intelligence to big models are at risk.
- Investing in small local models with high engineering scaffolding.
- Small companies might not be able to access new solutions.
- Tokens are not free!!
- Patiently waiting for a massive MiTM and data leak on a provider.

Thanks for your attention!
